

MEASURE DIAGRAM 3

This diagram is to illustrate how to measure for driveshafts with a u-joint at one end and a flat flange at the other.

NOTE: Vehicle should be measured under normal load with the wheels on the ground and axles under normal load or rear end supported on the safety jack stands. Driveshafts should never be measured with the rear suspension hanging.

#1 What is the overall length measurement from the end of the transmission or transfer case housing end to the flat surface on the pinion yoke? _____ INCHES

#2 How wide does the rear u-joint need to be to fit your pinion yoke?

2A - If your pinion yoke DOES NOT have locating tabs _____ INCHES

(see measure Diagram 10 for further assistance with "c" clip style yoke measurements)

2B - If your pinion yoke DOES HAVE locating tabs $3 \frac{7}{32}$ or $3 \frac{5}{8}$ INCHES

(see measure Diagram 9 for further assistance with locating tab style yoke measurements)

#3 What size is the diameter of the caps on the rear differential yoke? $1 \frac{1}{16}$ $1 \frac{1}{8}$ $1 \frac{3}{16}$

#4 What is the diameter of the pilot of the flange? _____ INCHES

#5 What is the bolt circle diameter of the flange? _____

(see measure Diagram 11 for further assistance with flange measurements)
